Video Transcript

Jorge Hidalgo, Tech Architecture Science Senior Manager, and Antonio De La Prieta, Technology Practice Builder Executive

Modern Engineering

IES Voices

Toni: Hello, Jorge.

Jorge: Hello, Toni.

Toni: I believe in modern engineering. A better way of delivering business value through the perfect blend of Agile and DevOps practices, polyglot and cloud native architectures, solidly founded on software engineering craftsmanship. Modern engineering is the key to unlock huge benefits for today’s businesses.

Jorge: How cool would it be to deliver at the speed of now, transforming new ideas into delivered features in a matter of days, and not months, outstanding the competition?

How great would it be to provision new services dynamically, in a matter of minutes, even seconds when required?

Virtually infinite computing power to automatically scale those services in and out, up or down, to cope with the demands loads of today’s businesses?

Architectures capable to self-monitor monitored and self-heal themselves, reducing the burden of manual operations.

That is modern engineering potential. What do you want to deliver today?
