

PWN counters climate change with Microsoft Azure Video Transcript

Gijs ten Bosch:

As a drinking water supplier, we play a vital role in the economy. Business cannot be interrupted, one single moment and it's very important for our operations as well that the data we use to run our operations is very secure.

Jeffrey Tadros:

What I really like is how PWN is approaching their digital transformation which is really about creating satisfied customers and providing quality drinking water.

Jeroen Scholten:

Normally we talk about SLA's, Service Level Agreements, but in PWN they talk about XLA's, Experience Level Agreements. Shifting their focus to watch their customer. That's world class.

Gijs ten Bosch:

PWN is actually very proud to be one of the first companies in Holland and in future Europe to migrate SAP to the Azure platform. If you want to change such a key business application from one hosting partner to the Azure environment everything needs to be done right. We had a very good partner in Avanade and Accenture.

Henry Jan Top:

The most important thing that we do is the partnership. Really working together, the collaboration.

Gijs ten Bosch:

The migration was done in one weekend. It worked fantastic and on Monday morning everybody went to work and turned on their computers and worked as if nothing had happened.

Henry Jan Top:

PWN benefits from the platform of Microsoft, the innovation from Avanade, and the insights from Accenture.

Gijs ten Bosch:

It not only provided us a tremendous cost benefit, but it also made us future ready to take our operations to the next level.
